

Webcam - USB

SEN-13873

Description: This is a simple USB webcam that can be plugged into your computer or dev board and start capturing video right away. The resolution is 640x480, which is adequate for motion tracking or object detection, but don't expect to use it for photography or movie making. This new version has added a microphone as well.

Note: This webcam works well in Linux, so it pairs well with a pcDuino or other Single Board Computer.

Features:

- Max Resolution: 640x480
- 4' (1219mm) Cable
- USB A connector
- 3.5mm TRS audio connector
